Remediation and Report

SKYNET TECHNOLOGIES

Accessibility Statement Authoring

Accessibility statements are primarily for users of your content. Usually they will refer to accessibility statements when they encounter problems. Technical and jurisdictional language will likely lead to confusion and increase frustration rather than help your users. It is important to write in simple language and provide useful information to the users, rather than use the language of developers and lawyers.

Accessibility Monitoring and Support

Accessibility monitoring is a continuous and proactive process that regularly checks and assesses digital content for related violations. It's an early warning system, allowing developers and content creators to identify and remove accessibility barriers.

Remediation for Content-related Accessibility Issues

Accessibility remediation is the process of making digital content more accessible to people with disabilities. This may entail making changes to existing content and/or creating new content that is specifically intended for those with disabilities.

Accessibility Conformance Reports (VPAT)

The Voluntary Product Accessibility Template (VPAT), also known as an ACR (Accessibility Conformance Report) starts with an audit and provides current details for an accessible website, application, or any other digital assets. VPAT documents the current degree of conformance for the accessibility standards and guidelines, and it can be up to date periodically as per progress.

Accessibility Assessment Report

The Accessibility assessment report, also known as an Audit Report. Accessibility experts assess your digital assets manually for WCAG 2.1/2.2 AA compliance levels and provide full report to help them meet U.S., Canadian, European, and international regulations for websites, apps, and designs based on four principles (perceivable, operable, understandable, and robust) of accessibility.

Recommendations for Platform-related Accessibility Gaps

We provide support for ALL cross-platforms, using our cutting-edge technology based on unique AI algorithms. We can help clients to make their websites and all their digital content accessible without modifying code.

Dashboard

Ongoing Web Accessibility Monitoring

Maintaining accessibility is an ongoing process. We work with you through periodic assessments and support to identify any accessibility barriers and fix them. We also ensure that there are no new issues raised..

On-demand Web Accessibility Automated and Manual Testing

Running an accessibility test with Assistive Tech tools is the best first step towards greater digital inclusivity. The summary below covers manual and automated accessibility testing:

Manual testing: repeated, closely documented, hands-on group testing with people.

Automated testing: AI-powered solutions scan and test a website for accessibility nonconformance.

Digital Accessibility Evaluation

AccessibilityAssist PRO® monitoring tool is a continuous and proactive process that helps you determine if web content meets accessibility guidelines.

PDF Compliance Monitoring

PDF accessibility plays a pivotal role in providing people with disabilities equal access to information.

Accessibility monitoring is a continuous and proactive process that regularly checks PDFs for violations. It allows developers and content creators to identify and remove accessibility barriers.

Remediation Tracking

Remediation tracking allows you to track the remediation progress of accessibility issues. Accessibility monitoring provides clear progress about resolved accessibility issues.

Human Expert Auditing

Our team of expert auditors performs automated, manual ADA, WCAG 2.1, 2.2 audit, assistive technology testing, and provide ADA web accessibility audit report which incorporates web accessibility audit and evaluation process, initial evaluation result, failed guidelines, and actions taken to provide remediation.

Reports for Automated and Manual Evaluation

Automated Accessibility Evaluation includes accessibility score, list of remediated violations, and list of violations that require manual actions.

Manual Evaluation conducted by accessibility experts which includes list of violations Keyboard navigation, Screen reader, UI/UX improvements, missing components, etc.

# Accessibility Testing Tools

Web accessibility testing is the method of evaluating how easily users with disabilities can use a website. A subset of usability testing, web accessibility testing ensures that all users can understand, navigate, and interact with a website.

Training

Online Web accessibility self-service training (Videos) and user accessibility guide

We provide training to your in-house team (content manager, editors, admins, website management team) on website content accessibility best practices to ensure they are self-sufficient. Online custom web accessibility self-service training (videos) and user accessibility guide are created as per individuals' website compliance requirements and platform.

SKYNET TECHNOLOGIES

Why Skynet Technologies' Website Accessibility Solution?

- Accessible websites reduce the risk of any ADA related lawsuits.

- We have a team who have the know-how about ADA digital accessibility guidelines, testing tools, methods, and provide rapid website ADA accessibility audit, remediation, and compliance services in quick turnaround.

- Website accessibility is a crucial component of the DEI (Diversity, Equity, and Inclusion) initiative.

- We have experience in providing recommendations for platform-related accessibility gaps.
