CASE STUDY

**WordPress site migration with
website accessibility remediation,
VPAT report and ACR services for
Michigan based Law firm!**

Project Details

Services

Website Migration from GoDaddy to WordPress, All in One Accessibility integration, ADA and WCAG Website accessibility remediation, Website Redesign ,VPAT report and ACR

The Brief

Our client is a trusted legal services firm, seeking to modernize its digital presence while maintaining brand consistency. Their website, originally built using GoDaddy Site Builder, had limitations in customization, flexibility, and accessibility. The firm inquired with us to migrate their website to WordPress, ensuring the same design and content were retained, while also achieving ADA compliance to improve their site inclusivity.

The Challenges

Platform Restriction:

The GoDaddy Site Builder platform offers limited control over customization and scalability.

Preserve Design & Content:

The client wanted to retain the existing look and feel along with all current content during the migration.

WCAG Accessibility Compliance:

The site needed to meet ADA (Americans with Disabilities Act) and WCAG 2.1 standards to better serve users with disabilities and reduce legal risks.

Documentation for Compliance:

The firm requires accessibility documentation including a VPAT and ACR for internal use and legal assurance.

Our Approach and Solution

WordPress Migration with design revamp:

We have migrated the client website from GoDaddy to WordPress, including every visual element, structure, and content block to match the original design, and brand consistency.

We have migrated and revamped the website on WordPress from GoDaddy, including every visual element, structure, and content block with improved layout responsiveness and performance. The redesign subtly enhanced the user experience without disrupting the existing branding.

ADA Compliance Integration:

We integrated our All in One Accessibility solution to enhance website accessibility compliance with ADA, WCAG 2.0, 2.1, and 2.2 guidelines.

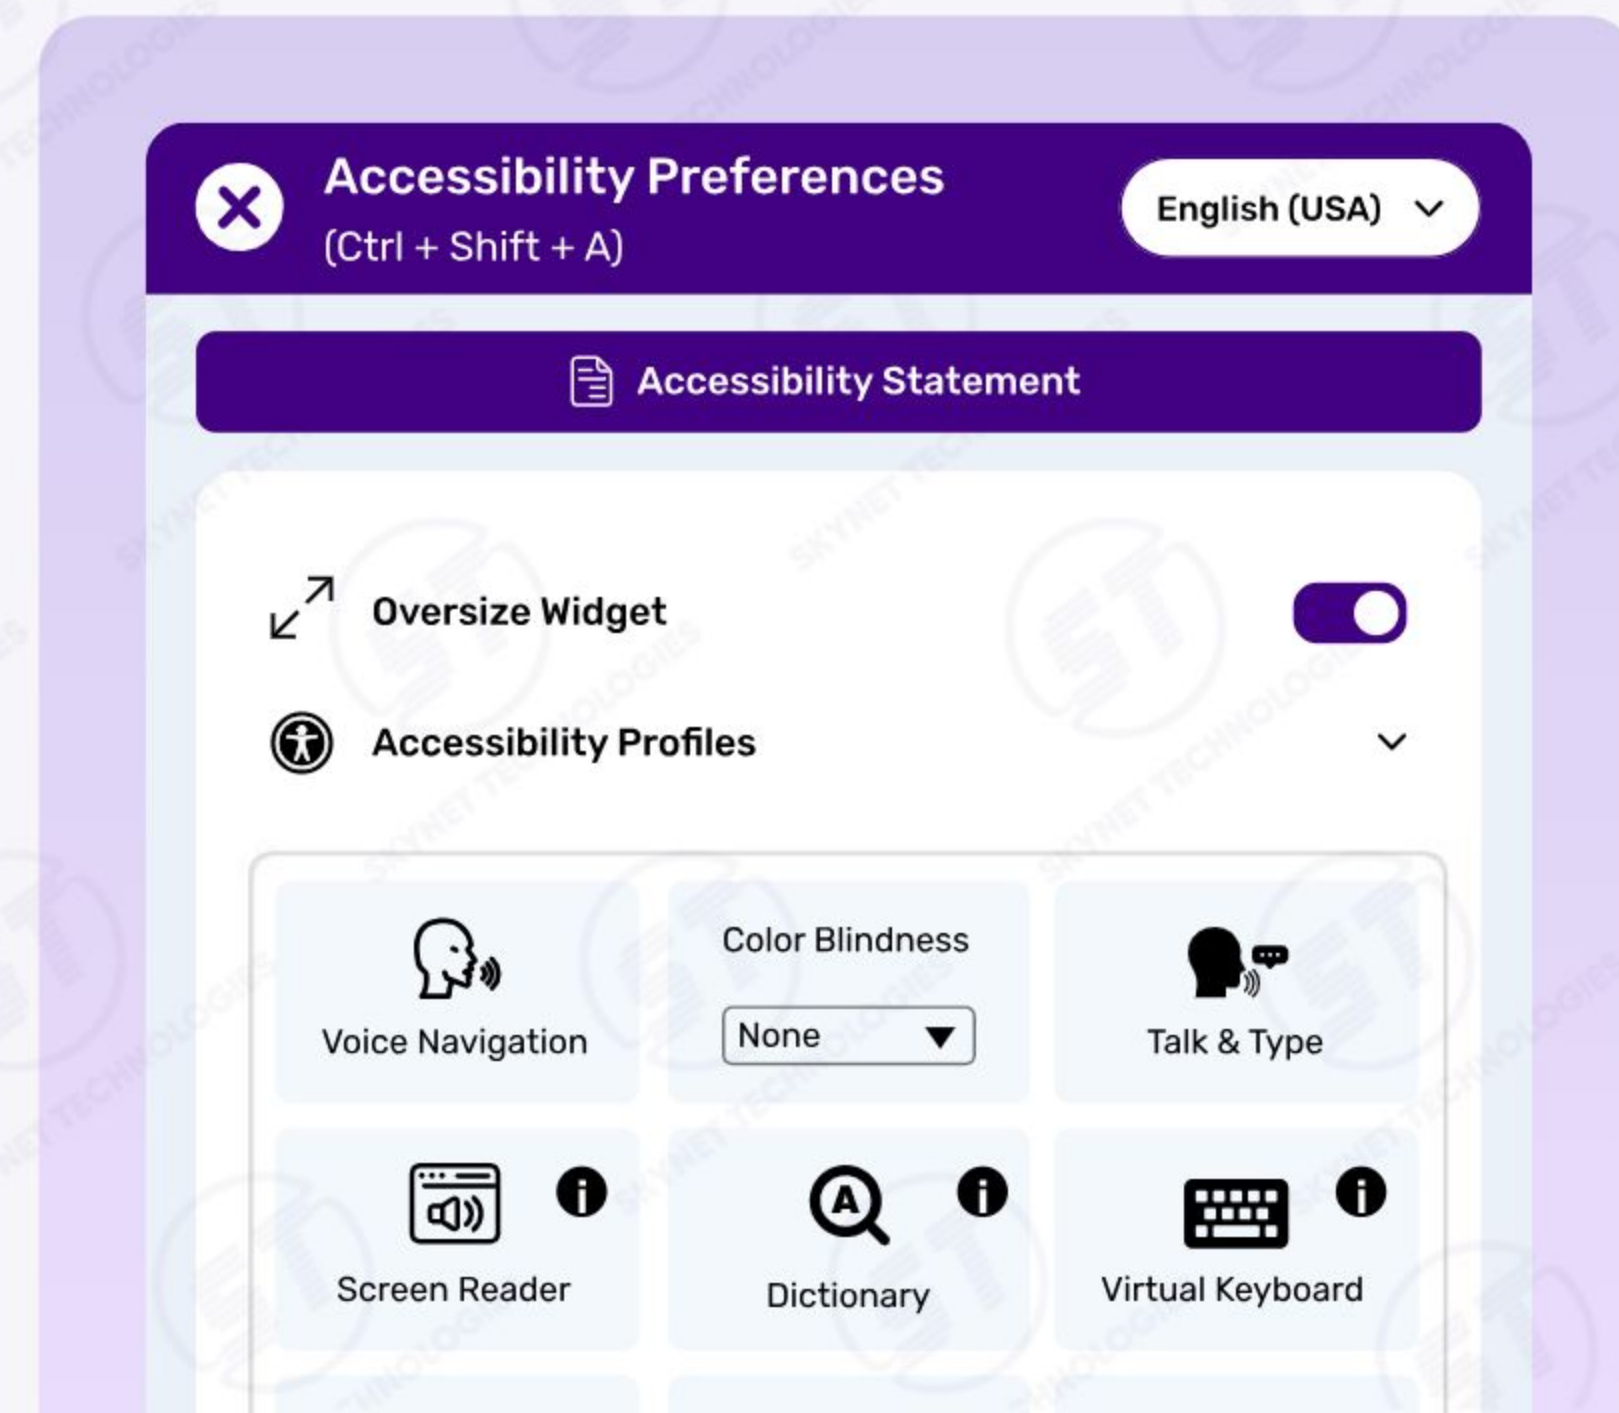

ADA and WCAG 2.1 AA Remediation:

A comprehensive audit was conducted to identify accessibility gaps; we generated the audit report and delivered it. Here's a sample audit report. Our team implemented accessibility remediation following WCAG 2.1 AA guidelines (Semantic HTML structure, ARIA landmarks and labels, Keyboard navigability, Text resizing and readable fonts, Screen reader compatibility, Color contrast adjustments, etc.).

All in One Accessibility® widget integration

Beyond identifying WCAG violations, an accessibility widget integration provided quick remediation for issues within its scope, allowing immediate improvements on first-party components while manual remediation was planned for more complex elements.

Our Approach and Solution

Mobile Responsiveness and Cross browser compatibility:

The website was tested thoroughly across the devices and browsers to guarantee seamless usability for all visitors.

VPAT report and ACR:

To support formal compliance documentation needs, we prepared a Voluntary Product Accessibility Template (VPAT®) and an Accessibility Conformance Report (ACR) that outlined the level of accessibility achieved and how the site aligns with ADA and WCAG standards.

The Impact

From site migration to revamp and ADA website remediation, they have achieved ADA WCAG compliance, better user experience and interface that had a positive impact on brand.
